

Additional information about the gym interior and exterior walls:

The interior walls of the Gym are ¾-inch thick tongue and groove exterior grade plywood with 2 coats of urethane varnish from floor to 14-feet above the floor. The walls above 14-feet to the ceiling are 5/8-inch thick gypsum board. The exterior Gym walls are standard vertical rib galvanized steel wall panels with fluoropolymer coating.

The Gym exterior walls are metal panel- may be difficult for mural...but perhaps an opportunity for sculpture to be mounted (as long as it doesn't void any warranty and can be waterproofed).
